Priority

1. Acknowledgment is made of applicant's claim for foreign priority based on applications filed in Japan on 01/27/2003 and 01/21/2003. It is noted, however, that applicant has not filed a certified copy of the 2003-17555, 2003-017485 and 2003-12058 application as required by 35 U.S.C. 119(b).

Allowable Subject Matter

2. Claims 8, 21 and 22 are allowed.

3. The following is an examiner's statement of reasons for allowance:

[Claim 8]: A digital camera comprising: a digital image unit that generates a digital image based on an optical image of an object; an internal memory in which an existing image is stored; a selection receiving unit that receives selection of the existing image stored in the internal memory; an object image outputting unit that outputs the digital image to a removable memory and that relates the digital image to the selected existing image; and a determining unit that determines whether an existing image, which is identical to the selected existing image, is stored in the removable memory, wherein, if the determining unit determines that the existing image, which is identical to the selected existing image, is stored in the removable memory, then the selected existing image is not output to the removable memory, and wherein if the determining unit determines that the existing image, which is identical to the selected existing image, is not stored in the removable memory, then the selected existing image is output to the removable memory.

Description of prior art:

4. JP 11234615A teaches preventing same image data from being stored in duplicate in the case that image data have already been in existence in a large capacity recording

Art Unit: 2622

medium, and to surely protect original image data in the case of processing of image edit or the like for image data after photographing. In the case of transferring a file of image data from a 1st recording medium to a 2nd recording medium, whether or not both the files are identical is discriminated by comparing an intrinsic code to a file going to be transferred with an intrinsic code to the file having already been stored in the 2nd recording medium (S1104), and when the discrimination result indicates that both the files are identical, the transfer of the file going to be transferred is skipped.

An important difference between the invention and most of the close prior art is that in the invention, an existing image in the internal memory is compared to an existing image in the removable memory. The claim specifically recites that the existing image in the internal memory is related to a digital image outputted from the image sensor. Even if the existing image is read as any image (e.g. any digital image used as comparison in the above mentioned prior art) in the internal memory being compared with an existing image in the removable memory (also read as any digital image present in the removable memory as taught in the prior art), the prior art still fails to teach that there is a relationship between the existing image and the digital image. Therefore the existing image as claimed is not similar to the digital image outputted from the image sensor. The specification teaches that the existing image is the image used to synthesize with the digital image which is the major distinction with the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
